

Using Rhinorejewel : I cannot start Rhinorejewel with KoalaInterface, it starts correctly as Rhinoceros plugin but if I start it as Rhinorejewel nothing happens and there is no Rhinorejewel icon in the notification area of the status bar.

The problem described sounds as firewall or antivirus program conflict. It is possible that after the latest update was installed, the application called Rhinorejewel_launcher that shows as Rhinorejewel icon in the notification area of the status bar is not opening because it is blocked by Windows firewall or AV protection.

Try giving the permissions in your Windows firewall and in AV program to Rhinorejewel_launcher as a trusted application. To make sure this is an issue, restart the computer, disable Windows firewall and in AV program and then start Rhinorejewel. If it runs correctly, firewall/AV program were the cause of your problem.
