

# Using Rhinoceros : Rhinoceros seems to be placing stones and blocks upside down or on the wrong side of the surface. How can I prevent that?

Check if the surface direction is correct with **Analyze > Analyze direction** command.

All Rhinoceros tools that insert objects, gems, blocks, drills, etc. always respect the normal direction of the surface. You could also try changing the Backface color setting (**Rhino Options > Appearance > Advanced Settings > Shaded**) to be able to distinguish surface frontface from backface easily:

*Using Rhin Jewel : Rhin Jewel seems to be placing stones and blocks upside down or on the wrong side of the surface. How can I prevent that?*
